Kingfisher Airlines Failure Analysis | Power BI Case Study

1.Problem Statement

Kingfisher Airlines was once considered one of the most premium airlines in India. However, the company eventually collapsed due to financial crisis and poor management decision. This creates a need to analyze the reasons behind its failure and understand the key factors that led to its downfall.

2.Objective

To identify the key reasons behind Kingfisher Airlines business failure and provide data-driven business insights and strategic recommendations.

3. Data Sources

Since the data was unstructured format, I used AI to extract the data and structure it, and then performed my own analysis using a dashboard.

4.Tools Used

- Power BI
- Excel
- Secondary Research

5. Dashboard KPIs

Mention the key metrics you used:

- Total Debt (₹ Cr)
- Total Loss(₹Cr)
- Consecutive Loss Years
- Destination
- Employees
- Market Position Change

6.Key Insights

Kingfisher Airlines had a good market entry and strong customer support in the beginning. However, problems started after the Air Deccan acquisition due to poor management.

The company's debt increased to around ₹4,000 crore because of expansion into international markets.

Initially, the company had a strong market position, but by 2012, losses increased due to high operating and fuel costs.

The company also faced issues like unpaid employee salaries.

Finally, continuous losses and high debt led to the shutdown of the airline in 2012.

7. Recommendations

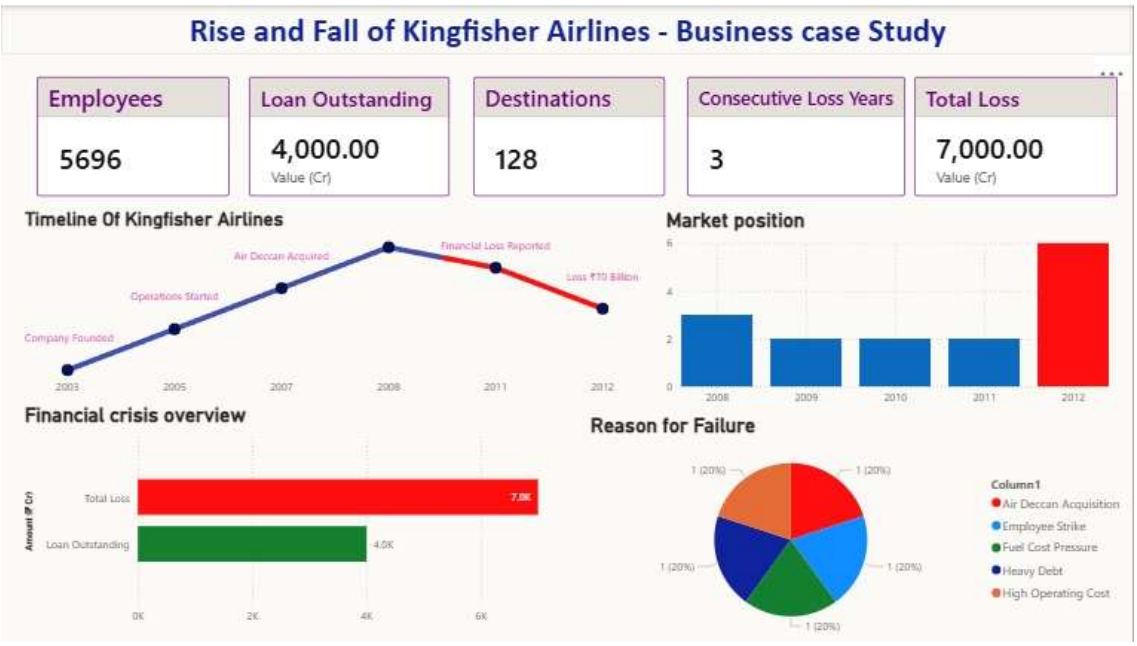
The company should focus more on the domestic market, where it was performing well. International expansion caused major losses.

Employees should be paid salaries on time, as employee satisfaction affects customer satisfaction.

The company should improve its management and make better decisions through proper planning.

Before expanding, the company should do forecasting to understand risks and profits.

Aggressive international expansion was a major reason for failure, so a balanced growth strategy is important.

8. Conclusion


This analysis indicates that the failure of Kingfisher Airlines was primarily driven by poor financial management, over-expansion, and unsustainable operating costs.
